COURSE TITLE: DIGITAL LITERACY

Project Report

Introduction

Digital literacy is an essential skill in today's technology-driven world. It enables individuals to effectively use digital tools, communicate responsibly online, and stay safe from cyber threats. As a Student Digital Ambassador, this project aims to create awareness among peers about important aspects of digital literacy, including online safety, professional communication, and digital presence.

This project consists of five tasks that cover different areas such as creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and studying cybercrime awareness. Each task helped in developing practical skills and improving understanding of how to navigate the digital world responsibly. Overall, this project provides a strong foundation for using digital technologies effectively in academic and professional life.

Task 1 – Infographic

For this task, I created a one-page infographic on digital literacy using Canva. Canva is a user-friendly design tool that offers various templates and visual elements, making it easy to create attractive and informative designs.

The infographic explains the concept of digital literacy and highlights its importance for students. It includes key topics such as what digital literacy means, useful digital tools like Google Docs and Zoom, safe internet practices such as using strong passwords and avoiding suspicious links, and email etiquette for professional communication. The content was presented using short bullet points and icons to ensure clarity and easy understanding.

One interesting aspect of this task was learning how to present information visually in a clean and organized manner. However, I found it slightly challenging to maintain a balance between text and design without overcrowding the infographic. This task helped me understand how visual communication can make information more engaging and effective.

Task 2 – Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle to build my digital portfolio. These platforms are important for students as they help in showcasing skills, projects, and professional information.

GitHub is used for sharing code and projects, allowing me to demonstrate my technical abilities. LinkedIn is a professional networking platform where I added my educational details and can connect with peers, faculty, and industry professionals. Kaggle is a platform for learning data science and improving problem-solving skills through practice.

These platforms will play an important role in my academic and professional growth over the next four years. I plan to regularly update my GitHub with projects, build a strong

professional network on LinkedIn, and use Kaggle to enhance my analytical and problem-solving skills. This task helped me understand the importance of maintaining a professional digital presence.

Task 3 – Platforms

In this task, I explored coding and collaboration platforms to improve my technical and practical skills. For the coding part, I used HackerRank and completed a beginner-level problem. This helped me understand the basics of problem-solving and coding in a structured way.

For the collaboration part, I created a Google Form titled "Digital Literacy Awareness Quiz." The form included five questions related to digital literacy, such as safe internet practices and commonly used digital tools. I also linked the form responses to a Google Sheet, which helps in organizing and analyzing the collected data efficiently.

This task was interesting because it combined both technical and practical aspects of digital learning. It showed how online platforms can be used not only for learning but also for sharing knowledge and collecting information. These tools will be helpful in my academic journey for assignments, collaboration, and improving technical skills.

Task 4 – Email Etiquette

In this task, I learned the importance of professional communication through email etiquette. I wrote two formal emails: one requesting an assignment extension and another expressing interest in a summer internship opportunity. Both emails included proper subject lines, polite greetings, clear message structure, and professional sign-offs.

I also created a social media do's and don'ts checklist to promote responsible online behavior. This included guidelines such as maintaining professionalism, avoiding sharing personal information, and respecting others online.

Poor digital communication can lead to misunderstandings or missed opportunities. For example, sending an email without a proper subject or using informal language can create a negative impression. This task helped me understand how to communicate clearly and professionally in academic and professional settings.

Task 5 – Cybercrime Awareness

In this task, I studied UPI and online payment fraud, which is a common cybercrime. I learned how attackers trick users into approving fake payment requests or sharing sensitive information like UPI PINs. This was surprising because many people are not aware that entering a UPI PIN is only required for sending money, not receiving it.

I also created a prevention checklist with safety tips such as not sharing UPI PINs, verifying payment requests, and avoiding suspicious links. I included reporting details like the National Cyber Crime Portal and helpline number 1930.

This task made me more aware of online financial risks. As a result, I will be more cautious while making digital payments and ensure that I verify all transactions before approving them.

Conclusion

This project helped me understand the importance of digital literacy in today's world. Through various tasks, I learned how to use digital tools effectively, communicate professionally, and stay safe online. It also helped me build my digital portfolio and explore useful platforms for learning and collaboration.

The knowledge gained from this project will be valuable throughout my academic journey and future career. Overall, this project enhanced my awareness and skills, making me more confident in using digital technologies responsibly and effectively.
